4007ES Fire Control Panels

Fire Detection and Control with Addressable Initiation and Addressable Notification

Features

Flexible standard combination of addressable initiation and addressable notification

4.3" (109 mm) Diagonal color touchscreen display:
- Convenient and intuitive user interface provides detailed system status and individual point information
- Supports dual language selection, including unicode character languages
- A custom background display appears when operation is normal (see page 7 for details)

Includes a 3 A IDNAC SLC (signaling line circuit) output power supply that provides enhanced power delivery to addressable notification appliances:
- A constant 29 VDC source voltage is maintained during alarm, even during battery operation, allowing strobes to operate at higher voltage with lower current and ensuring a consistent current draw and voltage drop margin under both primary power and secondary battery standby
- Efficiencies include lower strobe currents, wiring distances up to 2 to 3 times farther than with conventional notification, support for more appliances per IDNAC SLC, and smaller gauge wiring. This provides installation and maintenance savings. With high assurance that appliances will operate as normal during worst case alarm conditions
- IDNAC SLCs are compatible with both TrueAlert ES and TrueAlert addressable notification appliances, and remote 4009 Series IDNAC Repeaters to extend power and wiring distance even farther and provide for up to 127 addressable notification appliances
- Power supply provides battery backup charging of up to 33 Ah; up to 18 Ah for cabinet mounted batteries and up to 33 Ah batteries for mounting in close-nippled remote battery cabinet

Electrically isolated IDNet+ addressable initiating device SLC:
- Provides built-in short circuit isolation for monitoring and control of TrueAlarm analog sensors and IDNet communications monitoring and control devices; for use with either shielded or unshielded, twisted or untwisted single pair wiring; outputs are Class A or Class B
- Standard panel SLC provides up to 100 addressable points; optional additional loop expansion modules provide an additional isolated loop with short circuit isolation for the IDNet+ channel; each loop expansion module also provides an additional 75 addressable points to the IDNet+ channel capacity for a total of up to 250 addressable points

Software Feature Summary:
- Current and previous panel configuration are both maintained in on-board memory to allow easy selection of desired revision
- An internal Ethernet service port and an internal serial service port are available for service computer connections to perform configuration updates, downloads and uploads; report downloads, and system software updates (Ethernet port only); the serial port provides the connection for the optional TrueInsight Module

Software Feature Summary (Continued):
- An internal USB interface allows a compatible portable memory device (memory stick/thumb drive) to store job revisions, update revised jobs and panel software, and save detailed system reports from the panel without requiring a service computer

Optional modules and connections include:
- Point or Event DACT assembly that is compatible with IP Communicators
- Up to two additional IDNet+ addressable device output loop connections with short circuit fault protection and with 75 additional point capacity each
- Front mounted 48 LED annunciator with custom label inserts provides 24 Yellow LEDs, 20 Red LEDs, and 4 Red/Green LEDs. LEDs are programmable for up to 24 IDC zones of alarm and trouble annunciation or as required for custom annunciation requirements
- Dual Class A IDNAC Isolator (DCAI)
- Remote LED annunciator support via RUI (remote unit interface) communications port for use with unshielded, twisted pair wiring (UTP)
- Eight Point Zone/Relay Modules individually selectable as IDC or relay rated 2 A @ 30 VDC (resistive)
- Alarm relays and auxiliary relays
- City connections, with or without disconnect switch
- 4003EC Voice Control Panels
- 4009 Series IDNAC Repeaters
- Battery brackets for seismic area protection (see page 2)

General Mechanical:
- Compact red or platinum cabinet for convenient surface or semi-flush mounting; rated NEMA 1 and IP30

Listings and approvals under Simplex Time Recorder Co. are the property of Tyco Fire Protection Products.
Introduction

4007ES Series Fire Detection and Control Panels provide extensive installation, operator, and service features with point and module capacities suitable for a wide range of system applications. The convenient and intuitive color touchscreen provides easy access for typical system response actions and for detailed system review or configuration updates with password control to limit user access.

IDNet+ addressable initiation communications and IDNAC addressable notification communications are standard features. (Refer to data sheet S4007-0001 for 4007ES panels providing conventional notification.)

Operator Interface

Convenient Status Information. With the locking door closed, the glass window allows viewing of the display status LEDs. The user interface is a 4.3” diagonal color touchscreen LCD with separate status LEDs as shown below.

LED indicators describe the general category of activity being displayed with the LCD providing more detail. For the authorized user, unlocking the door provides access to the control functions and allows further inquiry by scrolling the display for additional detail.

Operator Interface and Software Features

- Convenient and detailed operator information is easily accessed using a logical, menu-driven touchscreen display with password access control
- Multiple automatic and manual diagnostics for maintenance reduction

Operator Interface Features (Continued)

- Alarm and Trouble History Logs (up to 1000 entries for each, 2000 total events) are available for viewing from the display or to be downloaded to a service computer or to the USB drive
- Module level ground fault searching assists installation and service by locating and isolating modules with grounded wiring
- WALKTEST silent or audible system test performs an automatic self-resetting test cycle and supports up to 8 WALKTEST groups
- Install Mode allows grouping of multiple troubles for uninstalled modules and devices into a single trouble condition (typical with future phased expansion); with future equipment and devices grouped into a single trouble, operators can more clearly identify events from the commissioned and occupied areas

Mechanical Description

- Locking door with polycarbonate window
- Latching front panel assembly swings forward for convenient internal access
- Smooth box surfaces are provided for locally cutting conduit entrance holes exactly where required
- Modules are power-limited (except as noted, such as relay modules)
- Battery compartment (bottom) accepts two batteries, up to 18 Ah, to be mounted within the cabinet without interfering with module space; charger capacity is up to 33 Ah; for batteries greater than 18 Ah, refer to page 7 for external battery cabinet details
- Cabinet assembly design has been seismic tested and is certified to IBC and CBC standards as well as to ASCE 7 categories A through F, requires battery brackets as detailed on data sheet S2081-0019
Main Menu Screen provides easy navigation to the function required. Buttons A, B, and C have programmable functions.

System Alarm Screen identifies active alarms with custom labels displayed, arrows allow navigation through the list.

System Trouble Screen identifies active troubles with custom labels displayed, arrows allow navigation through the list.

Trouble Log Screen allows review of past troubles with time stamp and point details shown.

Point Information Screen allows review of point details, arrows allow navigation through the information.

User Access Login Screen controls access to panel operations as determined per panel.
**IDNet+ Addressable Device Control**

**Overview.** The 4007ES provides an IDNet+ addressable initiating device Signaling Line Circuit (SLC) that supervises wiring connections and the individual device communications status on the SLC. With 2-wire IDNet+ SLCs, initiation, monitoring, and control devices such as manual fire alarm stations, TrueAlarm sensors, control relays, and sprinkler workflow switches can communicate their identity and status and receive fire alarm system control. Additional addressable interface modules include circuit isolators, conventional IDC zone adapters, and interface to other system circuits such as fans, dampers, and elevator controls.

**IDNet+ Addressable Device Operation**

Each addressable device on the IDNet+ communication channel is continuously interrogated for status condition such as: normal, off-normal, alarm, supervisory, or trouble. Both Class B and Class A operation is available. Sophisticated poll and response communication techniques ensure supervision integrity and allow for "T-tapping" of the circuits for Class B operation. Devices with LEDs pulse the LED to indicate receipt of a communications poll and can be turned on steady from the panel. With addressable devices, the location and status of the connected device is monitored, logged, and displayed on the operator interface LCD with each device having its own 40 character custom label for precise identification.

**TrueAlarm Addressable Sensor Operation**

Addressable initiating device communications include operation of TrueAlarm smoke and temperature sensors. Smoke sensors transmit an output value based on their smoke chamber condition and the CPU maintains a current value, peak value, and an average value for each sensor. Status is determined by comparing the current sensor value to its average value. Tracking this average value as a continuously shifting reference point filters out environmental factors that cause shifts in sensitivity.

Programmable sensitivity of each sensor can be selected at the control panel for different levels of smoke obscuration (shown directly in percent) or for specific heat detection levels. To evaluate whether the sensitivity should be revised, the peak value is stored in memory and can be easily read (or downloaded as a report) and compared to the alarm threshold directly in percent.

CO sensor bases combine an electrolytic CO sensing module with a TrueAlarm analog sensor to provide a single multiple sensing assembly using one system address. The CO sensor can be enabled/disabled, and can be used in LED/Switch modes and custom control. (refer to data sheet S4098-0052 for details)

**TrueAlarm heat sensors** can be selected for fixed temperature detection, with or without rate-of-rise detection. Utility temperature sensing is also available, typically to provide freeze warnings or alert to HVAC system problems. Readings can selected as either Fahrenheit or Celsius.

**TrueSense Early Fire Detection.** Multi-sensor 4098-9754 provides photoelectric and heat sensor data using a single 40070ES IDNet+ address. The panel evaluates smoke activity, heat activity, and their combination, to provide TrueSense early detection. For more details on this operation, refer to data sheet S4098-0024.

**Diagnostics and Default Device Type**

**Sensor Status.** TrueAlarm operation allows the control panel to automatically indicate when a sensor is almost dirty, dirty, and excessively dirty. The NFPA 72 requirement for a test of the sensitivity range of the sensors is fulfilled by the ability of TrueAlarm operation to maintain the sensitivity level of each sensor. CO Sensors track their 10 year active life status providing indicators to assist with service planning. Indicators occur at: 1 year, 6 months, and end of life.

**Modular TrueAlarm sensors** use the same base and different sensor types (smoke or heat sensor) and can be easily interchanged to meet specific location requirements. This allows intentional sensor substitution during building construction when conditions are temporarily dusty. Instead of covering smoke sensors (causing them to be disabled), heat sensors may be installed without reprogramming the control panel. The control panel will indicate an incorrect sensor type, but the heat sensor will operate at a default sensitivity to provide heat detection for building protection at that location.

**IDNet+ Device Wiring Reference**

**IDNet+ Addressable Channel Capacity.** The 4007ES provides an isolated output IDNet+ signaling line circuit (SLC) that supports up to 250 addressable monitor and control points intermixed on the same pair of wires. (250 total requires two 4007-9803 IDNet+ Loop Expansion Modules.)

**IDNet+ SLC Wiring Specifications**

| Maximum Distance from Control Panel | 0 to 125 ft (38 m); 50 ohms | 126-250 ft (762 m); 35 ohms |
| Total Wire Length Allowed with "T" Taps for Class B Wiring | Up to 1,250 ft (3.8 km); 0.60 μF |
| Maximum Capacitance Between IDNet+ Channels | 1 μF |
| Loading per device | 0.8 mA superv. , 1 mA alarm; 2 mA per activated device LED |
| Wire Type and Connections | Shielded or unshielded, twisted or untwisted wire* |
| Connections | Terminal blocks for 18 to 12 AWG |

Compatibility includes: IDNet communicating devices and TrueAlarm sensors including QuickConnect and QuickConnect2 sensors; see data sheet S4090-0011 for additional reference

* Some applications may require shielded wiring. Review your system with your local Simplex product supplier.

4 S4007-0002-6 11/2015
Addressable notification appliance communications include operation of TrueAlert and TrueAlert ES Visible only (V/O, strobe), Audible only (A/O, horn), Audible/Visible (A/V, horn/strobe), and strobes of Speaker/Visible (S/V) notification appliances. (S/V appliances require separate speaker wiring.) IDNAC SLC addressable communications allow each horn and strobe to be individually controlled using a single two-wire circuit, confirms the wiring connections to the individual notification appliance’s electronic circuit, and confirms communications between each appliance and the fire alarm control panel. Addressable communications increases supervision integrity versus conventional notification systems by providing supervision beyond the circuit wiring to each individual appliance and by constantly verifying the ability of each appliance to communicate with the control panel.

Individual Appliance Status and Settings. The fire alarm control panel monitors and records each addressable notification appliance status, type of appliance, and its configured appliance settings. A fault in any individual appliance automatically reports a trouble condition to the control panel.

Virtual NACs Provide Control Convenience. For control convenience, IDNAC notification appliances can be grouped into Virtual NACS (VNACs) for group control.

Panel Control Convenience. Applicable operation settings for each appliance can be programmed without having to replace appliances or remove them from the wall or ceiling. An appliance’s VNAC notification zone can be easily changed through programming without having to add additional circuits, conduit, and wiring. Audible and visible appliances for non-Fire Emergency Communications notification can be programmed to operate separately on the same pair of wires as the fire alarm notification appliances. The result is lower installation, retrofit, and overall life-cycle cost of ownership compared with traditional conventional notification systems.

Installation, Retrofit, and Life-Cycle Cost Benefits. With each addressable appliance capable of being controlled separately on the same two-wire IDNAC SLC, installation time and expense for both retrofit and new construction can be significantly reduced. When Class B wiring is used, wiring can be “T-Tapped” allowing more savings in distance, wire, conduit, and wiring. Audible and visible appliances for non-Fire Emergency Communications notification can be programmed to operate separately on the same pair of wires as the fire alarm notification appliances. The result is lower installation, retrofit, and overall life-cycle cost of ownership compared with traditional conventional notification systems.

Location Information, Diagnostics and Troubleshooting. Each addressable notification appliance has its own 40 character custom label to identify the location of the appliance and to aid in troubleshooting fault conditions. In conventional notification systems, conventional appliances are not capable of communicating with the control panel. Fault reporting on a conventional system is limited to the circuit wiring and the entire area (zone) covered by appliances on the notification appliance circuit (NAC) making it much more difficult and costly to locate and correct the source of a problem. Using the TrueAlert magnet test allows each appliance to individually identify its candela setting and address and to briefly operate if desired, and using the TrueAlert ES Appliance Self-Test feature provides detailed performance verification per appliance.

TrueAlert ES Appliance Self-Test Operation

On-Board Test Sensors. TrueAlert ES appliances are equipped with on-board sensors to detect strobe and/or horn output allowing efficient and unobtrusive Self-Testing. When Automatic Self-Test is initiated from the control panel, each appliance within the selected VNAC group will briefly operate and then report its Self-Test status to the control panel, all within several seconds. Silent Self-Test can be selected to test only visible appliance if desired. The control panel is in a trouble condition during testing and in the event of an alarm, Self-Test is automatically terminated.

Automatic Self-Test results are communicated to the control panel with a time and date stamp and are stored in memory. Results are viewable at the front panel display and printed reports are available from the panel USB port. (See sample reports on page 10.)

Individual Self-Test is selected from the control panel when individual appliances need to be observed to operate. Each appliance in the selected VNAC group will turn on its LED until individually activated by applying a magnet. After performing the individual test, the appliance LED turns off to indicate completion. Results are recorded the same as during the automatic test.

IDNAC SLC Hardware Reference

The 4007ES provides a 3 A IDNAC SLC for control and power to TrueAlert ES and TrueAlert addressable notification appliances. The power supply incorporates an efficient switching design that provides a regulated output of 29 VDC, even during battery operation. With 29 VDC minimum output at the panel, addressable notification SLCs can support wiring distances 2 to 3 times farther than available with conventional notification, or support more appliances per SLC, or work with smaller gauge wiring, or combinations of these benefits. The result is installation and maintenance savings with high assurance that appliances that operate during normal system testing will operate during worst case alarm conditions.

Power Supply Output Details:
- **RUI Communications** controls up to 10 remote devices at up to 2500 ft (762 m) for single run, or 10,000 ft (3048 m) total if wiring is Class B and T-tapped; output is selectable as Class B or Class A
- **Compatible RUI remote equipment** includes: 4066-9202 and 4066-9205 Color Touchscreen Annunciators (up to 6 total), 4100 Series 24 I/O and LED/Switch modules, 4602 Series LED/Switch and I/O Annunciator modules, including 4602-9101 Status Command Units (SCU), and 4602-9102 Remote Command Units (RCU)
- **IDNet+ SLC Output** provides electrically isolated Class B or Class A communication; standard capacity is up to 100 addressable points with expansion for up to 250 points using up to two 4007-9803 IDNet+ Loop Expansion Modules (as described on page 4)
- **Battery Charger** is dual rate, temperature compensated, and charges up to 18 Ah sealed lead-acid batteries in the battery compartment, and charges up to 33 Ah batteries in an external cabinet

Compatible Special Application Appliances
- Simplex TrueAlert ES and TrueAlert addressable notification appliances; contact your Simplex product representative for compatible appliances

Battery Charger Ratings (sealed lead-acid batteries)
- Battery capacity range: UL and ULC listed for battery charging of 6.2 Ah up to 33 Ah (batteries larger than 18 Ah require a remote battery cabinet)
- Charger characteristics and performance: Temperature compensated, dual rate, recharges depleted batteries within 48 hours per UL Standard 864; to 70% capacity in 12 hours per ULC Standard S527

Custom Background Display Details
- Supported file types: JPEG, BMP, GIF, and PNG
- Recommended image type is JPEG, recommended image size is 480 x 240, and the file size limit is 100 kb

Environmental
- Operating Temperature: 32° to 120°F (0° to 49° C)
- Operating Humidity: Up to 93% RH, non-condensing @ 90° F (32° C) maximum

Additional Technical Reference
- Installation Manual 579-1102
- Zone/Relay Module Installation Manual 579-1103
- Detailed Operator's Manual 579-1165

Module Locations:

1. Primary location for 4007-9801 Zone/Relay Module, or 4190-6106 Truelnsight Remote Service Gateway.
2. Location for a 4007-9802, 25 V Regulator Module (shown), a 4007-9804 IDNAC Dual Class A Isolator, or an additional 4007-9801 Zone/Relay Module.
3. 4007-9803 IDNet+ Loop Expansion Modules, maximum of two (two are shown).
4. IDNAC Power Supply Assembly.
5. Location for additional 4007-9801 Zone/Relay Module.
6. Location for additional 4007-9801 Zone/Relay Module.
7. 4007-9807 or 4007-9808 City Circuit Module, or 4007-9809 Relay Module.
8. Battery location for up to 18 Ah batteries. Note: No conduit entry or wiring in this area, 14-7/8" (378 mm) wide.
9. 4007-9806 SDACT location.
10. CPU and User Interface assembly.
11. Location for optional 4007-9805 LED Module.

NOTE: A system ground must be provided for Earth Detection and transient protection devices. This connection shall be made to an approved, dedicated Earth connection per NFPA 70, Article 250, and NFPA 780.

REPORT 10  TrueAlertES Self-Test Report 12:34:56pm   MON  01-JUN-15

Point ID          Date          Visual      Audible
T1-1-1            01-JUN-15     NO OUT      N/A
T1-2-5            01-JUN-15     NO OUT      NORMAL
T7-3-55           01-JUN-15     N/A         NO OUT
T9-2-45           01-JUN-15     NOT TST     N/A
T8-2-60           01-JUN-15     NORMAL     NORMAL
T1-2-4            01-JUN-15     N/A         UNSUPP

TRUEALERT_ES SELF-TEST REPORT COMPLETED
Press RETURN for next Screen OR CTRL-X to abort

Results Description:
NORMAL = works correctly
NO OUT = No Output, no light or sound was detected
NOT TST = no result; either the appliance did not return a result before the test ended or the test was conducted as silent (strobes only) and audible appliance was not activated
N/A = not applicable (no strobe on audible only, etc.)
UNSUPP = appliance not compatible with Self-Test (TrueAlert addressable appliance not TrueAlert ES addressable appliance)

Note: Additional TrueAlert ES Self-Test information is detailed in Operating Instructions 579-1165 shipped with the panel.
